

## **PSRV2 - 12**

## SPECIFICATION:

Max working pressure: 310bar

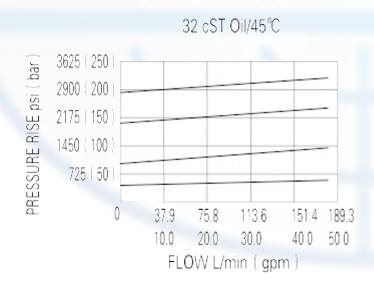

Flow max: see performant chart
Internal leakage: <115cc/min/310bar

Filtration of oil: 25m or better Temperature:  $-30 \sim +110$ °c

Cavity: 12 - 2

Installatin torque:  $45 \sim 50 \text{Nm}$ 

## **PERFORMANCE**

The valve prevents flow from 1 to 2 until pressur at 1 exceeds the set crack pressure and open the pilot section.

the pilot flow creates a pressure differential across the spool which causes the valve to open allowing flow from 1 to 2 protecting the circuit from over pressurization.
